CLASSIFYING DESTONER - MODEL: ACDS

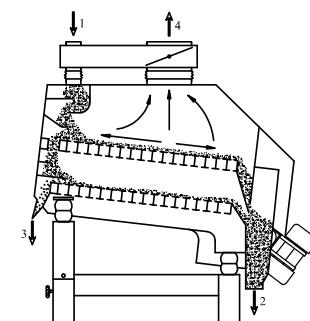

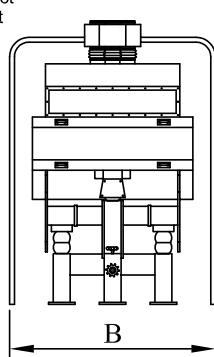

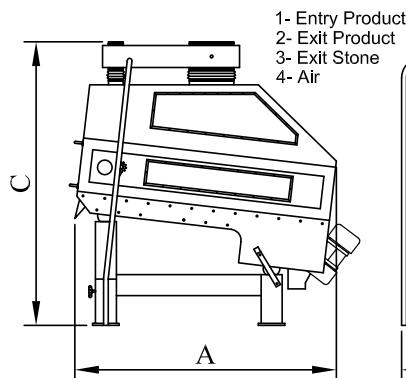

Classifying destoners are used to separate the stones from the grain. Heavy materials are separated from light ones by the difference in the specific gravity of the materials.

Épierreuses sont utilisées pour séparer les pierres de la matière première dans les usines de transformation de céréales. Matériaux lourds sont séparés de ceux qui sont légers par le poids de l'espécifices des matériaux.

Las tararas radiales se utilizan para separar polvo, impurezas livianas, granos quebrados de cereales no procesados. El sistema tiene la ventaja de reutilizar la mayor parte de su aire sin agotarlo y por ellos no hay necesidad de un sistema central de aspiración o filtro especial por los que se reduce el consumo de energía.

MODEL	ACDS-100	ACDS-120	ACDS-180
Capacity (t/h)	4-6	8-10	10-18
Motor (kw)	2x0,18	2x0,37	2x0,75
Air (m³/min)	90	120	150
Dimension (mm)			
A	1580	1580	1650
B	1070	1640	2130
C	1820	1860	2015
Weight (kg)	525	765	820

"The capacities for the machines and equipments shown in this catalogue are for wheat having 780 kg/m³ specific gravity and may vary depending on the specific gravity, humidity and foreign material contents of grain"
